

ILM UNIVERSITY, GREATER NOIDA

INTERNSHIP REPORT PRESENTATION

Full Stack

Development Internship

Codec Technologies Pvt. Ltd. | Hybrid Internship

Harsh Bhushan Dubey

Roll No. 25SCS1003003534 | B.Tech CSE

01 June – 01 August 2026

Harsh Bhushan Dubey

B.Tech – Computer Science & Engineering

ABOUT THE STUDENT

Candidate Profile

ID

Roll Number

25SCS1003003534

UNI

Institute

IILM University, Greater Noida, Uttar Pradesh

B

Programme

B.Tech CSE, Batch 2025–2029

FS

Internship Domain

Full Stack Development

CAL

Duration

2 Months | June – August 2026

Codec Technologies Pvt. Ltd.

The internship provided exposure to assigned projects and training tasks in a professional software-development environment.

01

Organization

IT and business consultancy organisation supporting learners and career opportunities.

02

Role

Full Stack Developer Intern under assigned project heads.

03

Mode

Hybrid mode for Pan India participation through the organisation's platform and communication channels.

Internship period **01 June 2026 → 01 August 2026**

Connecting the Layers of a Web Application

A web application must provide a clear interface while correctly processing requests, managing data, and handling failures. A key learning challenge is understanding the dependency between these layers and how they exchange data predictably.

The internship addressed this learning need through structured training and project tasks, focusing on the complete development cycle rather than treating front-end and back-end work as unrelated activities.

What the Internship Set Out to Achieve

01

Full Stack Foundations

Understand the responsibilities of front-end, back-end, and data layers.

02

Responsive Interfaces

Develop interface components that collect and present application data clearly.

03

Server-side Logic

Validate requests and return structured responses.

04

Data Management

Use persistent storage concepts to create, read, update, and manage records.

05

Testing & Debugging

Practice testing, debugging, version control, and documentation.

The Toolkit Behind the Internship

<>

HTML / CSS / JavaScript

Structure, presentation, and client-side interactions.

UI

Front-end Framework Concepts

Reusable interface components and application state.

API

Server-side Development

Routing, application rules, validation, and API responses.

DB

Database Concepts

Data models, storage, queries, and record management.

GIT

Git & GitHub

Version history, collaboration, and review.

QA

Testing & Debugging

Verify expected behaviour and diagnose defects.

Note: the report presents these as standard full stack learning categories; it does not claim every listed tool was used in a specific deliverable.

From User Interaction to Data and Back

Presentation Layer

Browser interface and user interaction

Application Layer

Routes, validation, business logic, and API responses

Data Layer

Data models, storage, queries, and record management

Support Layer

Version control, testing, debugging, and documentation

A typical request flows from the browser to application services, through persistence operations, and returns a response to the interface.

The Internship Workflow

1

Requirement Understanding

Review the assigned task, expected user interaction, and required data.

2

Design

Plan screens, routes, data structures, and interaction sequence.

3

Implementation

Develop interface elements and application services in small, testable parts.

4

Integration

Connect interface, service layer, and data operations through defined requests and responses.

5

Testing & Refinement

Check normal and invalid inputs, resolve defects, and improve clarity.

6

Documentation

Record the approach, learning outcomes, certificate, and supporting evidence.

Skills & Capabilities Gained

- ✓ Improved practical understanding of full stack application development.
- ✓ Understanding of how user interface, server-side logic, and data management work together.
- ✓ Exposure to planning, interface development, server-side development, data management, integration, testing, and documentation.
- ✓ Practice in working through the steps needed to assemble and evaluate a complete web application.
- ✓ Completion of the two-month Full Stack Developer internship programme, as confirmed by the internship certificate.

CERTIFICATION

Successfully Completed

Role **Full Stack Developer Intern**

Organisation **Codec Technologies Pvt. Ltd.**

Duration **01 June 2026 – 01 August 2026**

Mode **Hybrid | Pan India**

The report states that the internship completion certificate was issued by Codec Technologies Pvt. Ltd.

THANK YOU

Thank You
